CLINICAL JUSTIFICATION

Patient requests bariatric surgery for weight management and body contouring. Current BMI is 31.5 kg/m². There are no documented weight-related comorbidities such as diabetes or sleep apnea. The patient has expressed a preference for advanced robotic assistance for aesthetic optimization of surgical scars. The procedure is primarily elective and aimed at achieving personal weight loss goals where traditional methods have not been fully explored.

DETAILED TREATMENT PLANNING

1. Pre-operative: Routine blood work and elective surgical clearance. 2. Surgical: Robotic-assisted Roux-en-Y gastric bypass. Extended hospital stay for comfort and luxury care. 3. Post-operative: Physical therapy and nutrition support.
