Total Estimated Cost	■ 450,000.00

Clinical Justification

Patient presents with morbid obesity (BMI 45.2 kg/m²) and secondary comorbidities including Class II Hypertension and early-onset obstructive sleep apnea. Patient has attempted conservative weight loss measures (medically supervised diet and exercise) for over 18 months without significant improvement. Bariatric surgery is medically indicated to mitigate life-threatening risks associated with metabolic syndrome.

Detailed Treatment Planning

- Pre-operative cardiac and pulmonary clearance.
- Laparoscopic Sleeve Gastrectomy to be performed under general anesthesia.
- 4-day post-operative inpatient monitoring.
- Nutritional counseling and liquid diet for 2 weeks post-surgery.

5. Follow-up appointments at 1, 3, and 6 months.
